

the **BIG IDEA** worksheet

Identify a project you are working on where you need to communicate in a data-driven way.
Reflect upon and fill out the following.

PROJECT E-Commerce Shopping Behavior Analysis

WHO IS YOUR AUDIENCE?

- (1) List the primary groups or individuals to whom you'll be communicating.

Retail marketing managers
E-commerce directors
Small business owners running online stores

- (2) If you had to narrow that to a *single person*, who would that be?

A marketing manager at a mid-size online clothing retailer who controls the ad budget and reports to a CEO

- (3) What does your audience care about?

Getting the highest return on their marketing spend
Knowing exactly which customer segments to target
Whether discounts and promo codes are actually driving revenue
Which product categories and seasons to prioritize

- (4) What action does your audience need to take?

What is the expectation or outcome of your presentation:

Use the dashboard to continuously identify high-value customer segments, reallocate ad spend, and track shifts in product category performance"

Stop distributing discounts exclusively to male customers and start running targeted campaigns toward female buyers who already spend more per purchase without any incentive to do so

WHAT IS AT STAKE?

What are the *benefits* if your audience acts in the way that you want them to?

Higher revenue per transaction by targeting female customers who spend more
Reduced margin loss by eliminating ineffective discounts
Smarter budget allocation toward 56+ males for volume and females for value

What are the *risks* if they do not?

Continued overspending on ineffective blanket marketing
Over-discounting that kills profit margins
Missing the high-value customer segments that are already buying
Falling behind competitors who use data to target smarter

FORM YOUR BIG IDEA

It should:

- (1) articulate your point of view,
- (2) convey what's at stake, and
- (3) be a complete (and single!) sentence.

Online retailers are leaving money on the table by marketing to everyone the same way, when purchase data clearly shows that age, product category, and seasonal timing — not discounts — are the real a of customer spending
